

PinDock

PinDock — Quick Manual

Before you start

PinDock is a desktop frontend for Visual Pinball (VPX).

First, make sure VPX works on its own: open VPX and run a table directly.

First-time setup

Extract/install PinDock.

In PinDock, set:

VPX executable path

Tables folder (your .vpx files)

Save.

Table setup (important)

When launching from PinDock, you can't adjust VPX settings.

Do your table tweaks in VPX first (video/audio/POV/table options).

Play & exit

Launch a table from PinDock and be patient VPX needs a moment to start.

To exit and return, press Q (and be patient on exit too).
